

LumaNote Account Policy

LumaNote keeps each workspace tied to a verified account. Users can sign in from a phone, laptop, or browser with the same credentials.

Sync behavior

LumaNote syncs text notes every few seconds when the user is online. Large attachments are uploaded after note text so that writing stays fast. Sync is enabled by the Cloud sync setting in Settings > Sync.

Offline mode

When network access is unavailable, LumaNote stores edits in a local cache. After connectivity returns, the app reconciles local edits with the cloud copy. If the same note changed on two devices, LumaNote asks the user which version to keep.

Sharing

A note can be shared with teammates by email address. The note owner chooses whether each teammate can view or edit the note.
