

## UN Results-Based Management and Logframe Guidance (Seed)

### Core RBM logic:

- Define clear outcomes linked to measurable outputs and activities.
- Use SMART indicators with baseline, target, means of verification, and frequency.
- Maintain assumptions and risks at each results level.

### Drafting requirements for UN-style concept notes:

- State problem context, affected population, and equity considerations.
- Show implementation feasibility and delivery partnerships.
- Keep indicator definitions operational and auditable.
