

Q3 Widget Launch - keyboard focus trap in the widget designer

Q3 Widget Launch accessibility issue from the a11y review pass.

Keyboard-only users get trapped in the widget property panel. Once focus enters the panel, Tab and Shift+Tab cycle inside it and never return to the canvas, so the rest of the designer is unreachable without a mouse. NVDA does not announce the panel boundaries.

No existing task on the launch covers this. Filed via this email so the morning sweep picks it up. Attached PDF has the steps, the failing WCAG criteria, and the assistive-tech matrix.
