

Q3 Widget Launch - canvas autosave drops edits after session timeout

Q3 Widget Launch data-loss report from the beta cohort.

When a designer session sits idle long enough for the auth token to refresh, the canvas silently reverts to the last manual save on the next edit. Any work done since the last manual save is gone with no warning. Reproduced twice on the current beta build.

No existing task on the launch covers this. Filed via this email so the morning sweep picks it up. Attached PDF has the timeline, the affected build number, and the repro steps.
