

Q3 Widget Launch - export to CSV crashes the app for Northwind

Q3 Widget Launch field report from Northwind.

Northwind hit a hard crash on Export to CSV with a large widget composition (about 14 widgets on one canvas). The export spinner runs for roughly 30 seconds and then the app crashes back to the home screen. They lose unsaved work.

Repro is consistent on their tenant. Severity from their side: blocker for the Q3 rollout. Attached PDF has the customer's repro notes verbatim.
