

Q3 Widget Launch - cold-start first paint regressed after the widget bundle

Q3 Widget Launch perf note from the performance dashboard.

First paint regressed from 380ms to 740ms on the cold-start path after the Q3 widget bundle was added. The regression reproduces on a clean profile with the cache cleared.

Not a blocker for GA but it should stay on the watch list. Attached PDF has the trace summary and the before/after first-paint numbers.
