

# **Q3 Widget Launch - mobile auth callback fails after SSO**

Q3 Widget Launch issue from mobile beta cohort.

Mobile users on the Q3 Widget Launch beta build cannot complete sign-in. After the IdP redirect the OAuth callback returns a 500 and the app drops the user back at the login screen. Reproduced on iOS and Android in the same build.

No existing task on the launch covers this. Filed via this email so the morning sweep picks it up. Attached PDF has the device matrix and the exact callback URL that 500s.
