

Q3 Widget Launch — Accessibility regression report

Launch: Q3 Widget Launch

Filed by: Accessibility Team

Reviewed against: WCAG 2.2 AA

Keyboard navigation regressed on the widget designer after the Q3 Widget Launch bundle landed. Specifically: tab order on the widget palette skips the second column entirely, and focus indicators are no longer visible on the resize handles when the user is in high-contrast mode. Both behaviors worked correctly on the Q2 build.

This is a P1 accessibility regression and a Q3 Widget Launch blocker per the org-wide policy on shipping with known WCAG AA regressions. We need a fix or an approved exception in writing before GA.

Suggested owner: Widget Platform team (the bundle change is the likely cause).

Severity: P1, blocker on the accessibility track.

Launch: Q3 Widget Launch.
