

Aster — your design system, on autopilot

Keep every team on-brand without a single Slack ping to the design team.

The problem

Design systems rot. Components drift, tokens fork, and by month six every team has its own "almost right" button. Keeping it consistent is a full-time job nobody owns.

The solution

Aster watches your codebase and Figma, flags drift the moment it happens, and opens the fix as a PR. Your design system stays alive — automatically.

Why now

Signal	Detail
Traction	60 teams · 88% monthly retention · \$14k MRR
Wedge	The only tool that auto- <i>fixes</i> drift, not just reports it
Timing	Design-engineering is finally a budget line

The ask

Raising a \$2M seed to reach \$50k MRR. **Let's talk** → team@aster.design
